10 Reasons Why You Should Buy...

Our Premier Single Flue Caps Offer You these Outstanding Features!

- The Cap is 15% larger than conventional damper caps—providing extra protection from rain and snow while extending the life of your chimney
- The double-layer Energy-saver lid provides a full half inch of insulation to keep out hot air in summer and cold air in winter which, in turn, lowers your A/C and heating costs
- The insulation is sandwiched between two pieces of 24ga 304 Stainless Steel—compare that to the competition which has only a single piece of steel with little or no insulation!
- Our high-temp gasket and silicone is made to withstand temperature extremes of -85 to 450°F.
- The Cap is removable for easier inspection, cleaning, and maintenance
- Several sizes available—fits flues from 9”x9” through 18”x18”
- Heavy-duty 50ft Cable—20 feet longer than the industry standard
- Available in several powder-coated finishes—even custom colors!
- The unit has 3/4” mesh screen designed to keep debris and critters out (also available in 5/8” California mesh)
- Worry-free, Lifetime Warranty

Choose the Right Size for Your Job

Size	Base Opening	Outside Lid Size	Item No.
9x9	10.5”x10.5”	16”x16”	PDC99
9x13	10.5”x14.5”	16”x20”	PDC913
12x12	13.5”x13.5”	19”x19”	PDC1212
13x13	14.5”x14.5”	20”x20”	PDC1313
13x18	14.5”x19.5”	20”x25”	PDC1318
18x18	19.5”x19.5”	25”x25”	PDC1818

Avoid these costly and damaging risks:

- During winter, heating bills rise due to the loss of hot air up the flue and downdraft of cold air
- During summer, A/C costs increase because your unsealed chimney acts like an open window
- Leaves, Insects, birds, and rodents can find their way into your house
- Rain, sleet, and snow can build up inside chimneys—harming mortar, brick, and flue liners
